ABSTRACT

A system, method and computer program product are disclosed for an auction function utilizing a network-based supply chain management framework. Data is received via a network from a plurality of stores of a supply chain. A plurality of users are allowed to access to the data utilizing a network-based interface. A plurality of goods are displayed to the users accessing the data utilizing the network-based interface. Subsequently, the acceptance of bids on the goods is allowed from the users utilizing the network.
